Main Loop

Every game that is not text-based, i.e., that has movement and/or animations, should have the following structure:

```
gameMode
do
    cls
    <game logic>
    <render calls>
    flip
loop
```

See "Video routines" for more details. Example:

```
' moving a ball at
' a constant speed
gameMode
do
    cls
    x += 10
    y = 240
    z = ~n
```
